

1. Visit <https://ngrok.com>, and you should see a page like this, and click 'Sign up' on the top-right:

2. After signing up with your email that you use for Inspirit AI along with verifying your email, head to <https://dashboard.ngrok.com/get-started/your-authtoken>. You should see a page that looks like this:

3. See your Authtoken in the center of the screen and take note of it. If your project group decides to deploy your model to the web, you will insert your Authtoken into your notebook (to be provided then). **Do not continue to the next step until you have completed the first half of the program. There is no notebook to insert the Authtoken in or installation for you to complete as part of your Pre-Program Tasks.**
4. Copy the Authtoken from there, and then head to whichever notebook you have already installed Streamlit with (i.e. after the ‘!pip -q install streamlit’ cell), and paste the following in a new cell:

```
!ngrok authtoken <token>
```

replacing ‘<token>’ with the Authtoken you just copied. In most projects, this should already be implemented and you can just paste your token where it says ‘**#Paste your authtoken here**’ in the Streamlit install cells.

4. After this, run all your other Streamlit cells, and your Streamlit app should work!
